CONSTRUCTION

WRAPPED ASSEMBLY
The most common type of construction. The branches are directly attached to the stem and are bent down when shaping the tree. No assembly is required, but the large trees come in separate parts that have to be put together.

HINGED/UMBRELLA TREE
The branches are permanently attached to the stem in hinges and are folded down when assembling.

HOOK ON
Individual groups of branches are hooked onto the stem when the tree is being assembled. This design is used for very thick and full trees to allow them to be evenly shaped but cannot be used for pre-lit trees.

PUSH IN
The tips are pressed onto the stem where there is a bard part that acts as a hook for attaching the tips. This type is assembled and only needs some final adjustment before use.
